Here we have the fabulous Xotic RC Booster pedal in immaculate condition; never been used other than for testing. This is an absolute beauty of a pedal and has marvellous reviews and excellent demos on the web and YouTube.

Please Note: I have tested this with a guitar as well, and a baritone guitar. As I am also using a low C and a low D, it sounds fantastic in all frequencies. Therefore, from my experience, it can be used for anything - bass, guitar, baritone etc.

**Product Description:** The Xotic Effects Bass RC Booster is a great way to add a little oomph to your tone, either for a little extra volume or to colour your bass sound. The Bass RC Booster has a 2 band EQ, 15dB boost / cut function and smooth clean boost. Xotic have been mindful of making the Bass RC a pedal that will enhance your tone without completely masking it. As with all Xotic Effects, the Bass RC Booster is true bypass.
