

Matched Quartet/Quad JJ EL84 Tesla Tubes in Generic Box

Model : -

Manufacturer : -

Match Quartet/Quad of JJ EL84 Tesla Tubes - BRAND NEW in Generic Box The JJ EL84 has become one of the most popular EL84 valves used today. A favourite with musicians and amplifier manufacturers for their versatile application. Manufactured by JJ electronics, what used to be the Tesla name. The EL84 JJ projects a classic raunchy sound from Rock to Blues and Jingly warm clean tones. One of the most rebranded EL84's around today. You will see this valve in many different disguises. We don't believe in freezing (Cryogenic) these valves, hear them in their true natural form. Manufacturer's Blurb: JJ Valves need no introduction they are great quality & great sounding. They are well balanced and harmonically rich. If your looking for a great value valves for your amp then look no further. Also known as the 6BQ5. Platinum Matched & Tested We burn-in these valves for a minimum of 30-40 hours before matching. The reason we do this is to get rid of any faulty or weak valves and as a pre-grading process to allow the plate/grid mechanism to relax into it's rest position. Tiny differences in construction make for enormous differences in electrical characteristics, and thus if a tube is graded after it's been burned in then the measured characteristics hold true over its lifespan to a greater extent. This seems simple but it's amazing how many vendors ignore it. It's the reason so many people complain about poorly graded valves. These are Platinum Matched & Tested with state of the art digital & analogue measuring equipment for: • Current (ma) • Transconductance (gm) • Emission Quality • Grid Leakage • Shorts

Price : £34.95
